Your Magento commerce.
An Astro storefront.

The complete AgenticEcom Suite: a configurable Astro storefront plus the full collection of AgenticEcom Magento modules listed on our website.

ALL WEBSITE MODULES INCLUDED

Includes all headless modules and all Luma-compatible modules listed on agenticecom.net. Choose the Business, Studio or Agency licence to match the number of production stores you run.

Build around your catalogue

Keep Magento as your commerce engine. Use the Astro storefront, design presets and Astro Admin page controls to present products, categories and content in the style your store needs.

Use the right modules for each storefront

The Suite includes both module collections. Luma compatibility describes use with Magento's Luma storefront; it does not mean every Luma-facing feature automatically appears in Astro. Check each module's guide and the required headless integration before enabling it.

Explore the included collection

Browse current product pages and module guides for supported actions, configuration and compatibility. Installation and configuration should use the released versions suitable for your store.

Choose your licence.
Plan your launch.

All three Suite plans include the Astro storefront, all headless modules and all Luma-compatible modules listed on the website.

PRODUCTION STORE LIMITS

Business	1 production store
Studio	Up to 5 production stores
Agency	Up to 20 production stores

See the live Suite page for current prices, currency and tax treatment. This guide does not create a separate promotion or change the selected licence terms.

Updates, support and optional services

Twelve months of updates and priority support are included. Agree any later renewal or ongoing service separately under the current purchase terms. Hosting, database creation, data migration, training and custom development need a written scope; do not assume they are included in the licence price.

Before you order

Confirm your production site count, Magento and PHP versions, required module versions and integrations, migration needs, hosting arrangements and go-live responsibilities. Review your catalogue, checkout and mobile layouts in a representative demonstration.
